TYPOGRAPHY

PLAN & BOOK

Mars

Mars is the fourth planet from the Sun and the second-smallest planet in the Solar System, after Mercury. It is a terrestrial planet and the only one in the Solar System known to have a solid surface. It is also the only celestial body where life has been directly searched for. Mars has been referred to as the "Red Planet" because the iron oxide prevalent on its surface gives it a reddish appearance. Mars is a terrestrial planet with a thin atmosphere, having surface features reminiscent both of the impact craters of the Moon and the valleys, deserts, and polar ice caps of Earth.
